HTML Iframes

[< Previous](#)[Next >](#)

An iframe is used to display a web page within a web page.

Iframe Syntax

An HTML iframe is defined with the `<iframe>` tag:

```
<iframe src="URL"></iframe>
```

The `src` attribute specifies the URL (web address) of the inline frame page.

Iframe - Set Height and Width

Use the **height** and **width** attributes to specify the size of the iframe.

The attribute values are specified in pixels by default, but they can also be in percent (like "80%").

Example

```
<iframe src="demo_iframe.htm" height="200" width="300"></iframe>
```

Try it Yourself »

Or you can use CSS to set the height and width of the iframe:

Example

```
<iframe src="demo_iframe.htm" style="height:200px;width:300px;"></iframe>
```

Try it Yourself »

Iframe - Remove the Border

By default, an iframe has a border around it.

To remove the border, add the **style** attribute and use the CSS **border** property:

Example

```
<iframe src="demo_iframe.htm" style="border:none;"></iframe>
```

Try it Yourself »

With CSS, you can also change the size, style and color of the iframe's border:

Example

```
<iframe src="demo_iframe.htm" style="border:2px solid red;"></iframe>
```

Try it Yourself »

Iframe - Target for a Link

An iframe can be used as the target frame for a link.

The **target** attribute of the link must refer to the **name** attribute of the iframe:

Example

```
<iframe src="demo_iframe.htm" name="iframe_a"></iframe>

<p><a href="https://www.w3schools.com"
target="iframe_a">W3Schools.com</a></p>
```
